The Dashboard is the hub of action. Upon logging in, this is the first screen you will see. It'll provide you with an instant, over-the-shoulder glance at your teaching assignments, your to-do list, and the currently active modules without having to go through several menus.

Key Features of the Dashboard:

- The first row of the dashboard will be a row of summary KPI Cards (At a Glance). These will show you live statistics important to your everyday workflow, like how many students are enrolled in your modules, how many assignments you have on your total list that are active, as well as how many student submissions are waiting for you to review.
- The dashboard features dynamic progress bars for your active assignments, to help you manage your workload. This section displays a visual progress of the number of submissions you've successfully graded and the number of submissions that are pending (e.g. "45/50 Graded"). These progress bars will link directly to the grading screen of the corresponding assignment.
- My Active Modules, shows a grid or list of the individual subjects you have been assigned to teach for this semester. You can click on any module card to go directly to the filtered Course Materials page or the filtered Assignments page for that class.

- Don't miss any deadlines. This panel shows you assignments that will be due in the next 7 days, so you can get a head start on getting to know the next group of students' work.
- Quick Navigation (Sidebar/Top Menu): You can always find the main navigation menu on the side (or top) of the screen. You can then directly go into tasks:
 - Upload Lecture Notes and Resources: Upload lecture notes and other resources.
 - View Modules: View the modules that are assigned to lecturer.
 - Manage Assignment: Manage the all assignments.
 - Chat with Student: Talk directly with your enrolled students.

Quick Tip: If ever lost while navigating in-depth in the system, click the "UniManage" logo in the upper left corner to return instantly to this Dashboard view.

Managing Course Materials

Material name	Type	Description	Duration	Module	File	Actions
Week 1: MVC Architecture		Introduction to Model View Control...	2 Hours	Advanced Web Development	week1_mvc.pdf	[Download] [Edit] [Share] [Delete]
Week 2: Entity Framework Core		ORM Concepts and DbContext setup.	3 Hours	Advanced Web Development	week2_efcore.pptx	[Download] [Edit] [Share] [Delete]

The Course Materials section will be your virtual filing cabinet. Here you can upload, store and manage lecture notes, presentations and resources that your students need to study. Everything uploaded here will be automatically linked to its corresponding module, so that students can only access what is relevant to their modules. .

Navigating the Interface:

1. Click the "Course Materials" item in the navigation menu, and you will be shown a clean table with all of your resources you have uploaded so far.
 - Items will be identified by colored badges (PDF, Video, PPT). This will help you to see the format of resource at a glance.

- Action Buttons: Quick action buttons are located on the right side of each row to View Details, Edit or Delete that particular file.
2. Using the "Upload New Material" button at top right of the screen: If you want to upload a new resource to your students, you should use the "Upload New Material" button at the top right of the screen.
- Step 1: Input a clear Title and Description (Advanced Software Testing Strategies for Week 3).
 - Step 2: Click on the right Module from the list. Note: This is only a list of modules that are assigned to you.
 - Step 3: Select the material Type and provide the anticipated Duration (e.g. "2 Hours reading time").
 - Step 4: Click "Browse" to upload your file (PDF, PPT and Video files are supported).
 - Step 5: Click Upload. Your file will be securely stored in the system and you will be brought back to the library with a green Success message.

3. **Viewing and Downloading:** Click the "Details" button next to a material which you uploaded earlier to verify the file. Opens a special profile card containing summary information about the module and a direct "Download File" link to download a copy to your local computer.
4. **Update/Removal of materials:** Oops, something went wrong or syllabus changes. You have full control over your content:
 - Edit: Click on the “Edit” button (pencil icon) to correct the spelling error in the title or description.
 - Remove: If a resource is no longer relevant, click the "Remove" button (trash can icon). Attention: You will be redirected to a confirmation screen that is red. Deleting a material will delete the file on the student portal permanently.

Managing Assignments

The screenshot shows the UniManage interface for managing assignments. The top navigation bar includes links to Dashboard, Modules, Course Materials, Assignments, Submissions, and Reports. The user is logged in as lecture1@gmail.com. The main content area is titled 'COURSEWORK Assignments' and includes a 'Create new assignment' button. Below this is a table of assignments:

Assignment	Description	Issued	Deadline	Late submit	Updated	Module	Batch
Midterm Project: E-Commerce UI	Build a responsive UI usin...	5/1/2026 12:00 AM	5/20/2026 11:59 PM	5/25/2026 11:59 PM	5/15/2026 9:41 PM	CS204 Advanced Web Development	Software Engineering 2024 Intake A
Final Project: API Development	Create secure REST APIs wi...	5/10/2026 12:00 AM	6/15/2026 11:59 PM	6/20/2026 11:59 PM	5/15/2026 9:41 PM	CS204 Advanced Web Development	Software Engineering 2024 Intake A
Test Assignment	Test	5/20/2026 10:07 PM	6/25/2026 11:59 PM	6/30/2026 11:59 PM	-	CS204 Advanced Web Development	Software Engineering 2024 Intake A

Assignments is where you create, share, and organize course assignments. Unlike the general Course Materials, assignments are specific in their parameters: they are assigned to specific groups of students (Batches) and system's timeline logic is strictly enforced for assignments (Deadlines and Late Submission dates).

Navigating the Interface:

1. On the "Assignments" page (Main View), you'll see a list of all your assignments arranged in a neat table of all your current and previous assignments.

- **Target Indicators:** Find the rounded badges in the table. These immediately indicate to you which Module the assignment comes from, and which Student Batch is necessary to undertake the assignment.
 - **Action:** You can quickly see the Details, Edit the parameters or Delete the assignment on the right-hand side.
2. To assign a new assessment to your students, click on the "Create New Assignment" button at the top of the page. There will be a form with two columns that you will have to fill out to structure your needs well:
- **Step 1:** Basic Details: Fill in the Assignment Name and a detailed Description or set of instructions.
 - **Step 2:** Target Audience: Select the appropriate Module and the specific Student Batch you are trying to have complete this work from the drop down menus.
 - **Step 3:** Tight Deadlines: This is very important. Three dates will have to be chosen:
 - Issued Date: Date when students can get started.
 - Official date for entries to be submitted on time.
 - The last day to submit assignments. Work submitted between the Deadline and this date will automatically be marked as "Late" (The system will automatically assess any work submitted within this window of time as late).
 - Step 4: Attach the Brief: Attach the official Assignment Brief (PDF) which students can download the formal requirements. To publish the assignment to the student portal, click Save Assignment.

Save assignment

Cancel

3. Viewing Assignment Details - Clicking "Details" button (eye) will display a card in a dashboard format for that assignment. Here you can:

- Check the specific deadlines and parameters you used.
- To view the original assignment file you uploaded, click "Download Assignment Brief".
- Note: You will have to go to the "Submissions" tab (which is explained in the next section) in order to actually view the student work that has been submitted for this assignment.

4. Editing and Deleting

- **Edit:** If an extension is needed for the class, select the Edit button to extend the Deadline and/or Late Submission dates.
- **Delete:** To cancel an assignment completely, click on the Delete button.

- **Note:** The delete action of an assignment is destructive. Once you delete an assignment, it will be permanently removed and any student work or grades that were created for the assignment will also be deleted. Be sure to double-check before confirming a deletion!

Reviewing & Grading Submissions

Student submission review
Incoming assignments, downloads, and grading status at a glance.

FILTER INBOX
Batch filter: All [Filter]

STUDENT	ASSIGNMENT	BATCH	SUBMITTED	STATUS	MARKS	GRADE	REVIEW	ACTIONS
John Doe	Midterm Project: E-Commerce UI	Software Engineering 2024 Intake A	2026-05-18 14:30	On Time	85.5	A	Excellent work on the responsive design components.	[Download] [Grade / Review]
John Doe	Final Project: API Development	Software Engineering 2024 Intake A	2026-05-14 09:15	Pending	-15	A	Test Review	[Download] [Grade / Review]

After an assignment is published, students will start uploading the content. The Submissions section provides your grading section. All in one place, you can see who has turned in their product, know who is late, download their file for grading, and officially mark their final grade and comments.

Navigating the Interface:

1. Submission Tracker (Main View): The Submissions page will have a detailed list of all student responses.
 - Batch Filtering: If you're teaching hundreds of students, you can filter the list down to a specific Batch by using the dropdown filter at the top of the screen, making it a lot easier to grade.
 - It is easy to see from the coloured status badges in the table what the student's level is:
 - Green (On Time): The student handed in his/her work before the deadline.
 - Yellow (Late): The student who presented late.
 - Gray (Pending): Student has not yet turned in work.

2. Accessing a Student's Work: To start grading a specific student, find the student's row in the table and click on the blue "Grade / Review" button. It will open the special Grading Interface for that student.

Excellent work on the responsive design components.

Save grades

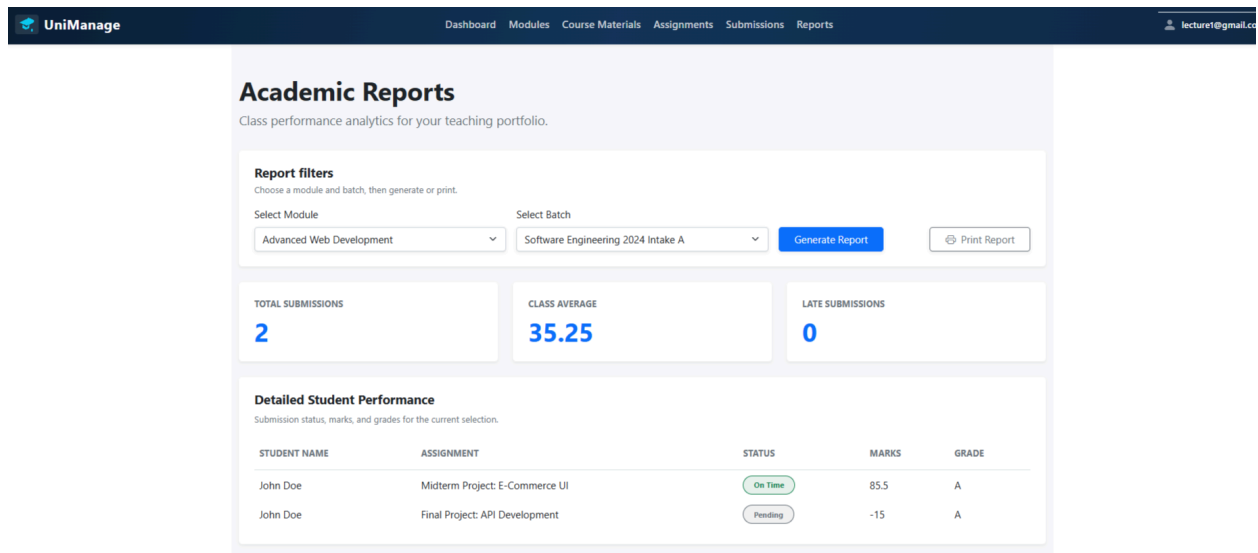

Cancel / Back to List

3. The grading screen is split into two neat sections for a more efficient workflow:
 - **Step 1:** Download the File (Top Card), which is located at the top showing the student details and the name of the assignment. Click the large "Download Student File" button to download their uploaded file (such as a PDF or ZIP file) to

your local computer. Files are not intended to be viewed online for security or formatting purposes and should be downloaded for offline viewing only.

- **Step 2: Record your Evaluation (Bottom Card):** When you have looked at the student's work, write your evaluation in the form on the bottom:
 - Marks: Write the number from 0 to 100.
 - Grade: Choose or enter the appropriate letter grade (A, B+, C).
 - Review/Feedback: Enter in the large text box detailed, constructive feedback. The student will be able to read it exactly the same way that you type it on their portal.
4. Save and Finalize After you have reviewed all the evaluations and are satisfied with the result, click on the "Save Grades" button.
- The system will officially enter the marks into the system, make the submission 'locked' and move you back to the tracking list.
 - Your grading progress bar will be updated immediately on the main Dashboard (e.g. 10/50 Graded will change to 11/50 Graded).

Detailed Student Performance
Submission status, marks, and grades for the current selection.

STUDENT NAME	ASSIGNMENT	STATUS	MARKS	GRADE
John Doe	Midterm Project: E-Commerce UI	On Time	85.5	A
John Doe	Final Project: API Development	Pending	-15	A

The Reports section serves as your own personal analytics dashboard. It is a tool to help you view each class' performance, trends of submission, and to export a detailed grade sheet for administrative records.

Navigating the Interface:

1. Filtering Your Class Data When you click on the Reports page, the dashboard will be empty at first. Specific class must be chosen to analyze.
 - Click on the Control Panel on the top of the screen.
 - Click a Module from the first drop down.
 - Click on the second dropdown button and choose the appropriate Batch.
 - Tap the main "Generate Report" button. This class data will immediately be displayed on the dashboard.
2. You will notice that there are three Key Performance Indicator (KPI) cards directly below the control panel. These provide an overview of the engagement of the class:
 - Total Submissions: The absolute number of assignments handed in by this batch for this module.
 - Class Average: Average of all assigned work that has been graded. (Note: Ungraded submissions will not negatively affect this average).
 - Late Submissions: An overview of the number of students who were late and used the grace period.
3. The Detailed Grade Sheet: The detailed Grade Sheet table is the primary area of the dashboard. This shows all the students from the selected Batch and their assignment statuses along with their marks.
 - Similar to a grading portal, the colored badges are used to easily show who was On Time (Green) and who was Late (Yellow/Orange).
 - Due marks: When a student has turned in a paper, but you have not yet marked it, you will see the "Due marks" section which will remind you to mark it.

4. Export and Print: When you must provide a hard copy of a grade sheet to college administration or log on to your own records as a PDF:
 - On the top right of the control panel, click on "Print Report".
 - This will bring up the print dialog box window. Its function is to automatically close the navigation menus and sidebars of your website when printing to make sure that you have a neat and professional looking document with your data and analytics.

Managing Your Profile & Account Security

The screenshot shows the UniManage web application interface. At the top is a dark blue navigation bar with the UniManage logo on the left and a menu of links (Dashboard, Modules, Course Materials, Assignments, Submissions, Reports) in the center. On the far right of the bar is a user profile icon and the email address 'lecture1@gmail.com'. Below the navigation bar is the 'Profile management' section, which has a subtitle 'Update your teaching profile, sign-in email, and password in one place.' The section is divided into three main panels. The 'Basic details' panel on the left contains input fields for First Name (Alan), Last Name (Turing), Contact Number (712345678), NIC Number (853456789V), Address Line 1 (123 Tech Lane), Address Line 2 (Innovation Park), Province (Western), City (Colombo), and ZIP Code (10000). A 'Save profile' button is at the bottom right of this panel. The 'Update email' panel on the top right contains fields for Current Email (lecture1@gmail.com) and New Email, with an 'Update email' button below. The 'Update password' panel on the bottom right contains fields for Current Password, New Password, and Confirm Password, with a 'Change password' button below. In the bottom right corner of the page, there is a watermark that says 'Activate Windows Go to Settings to activate Windows'.

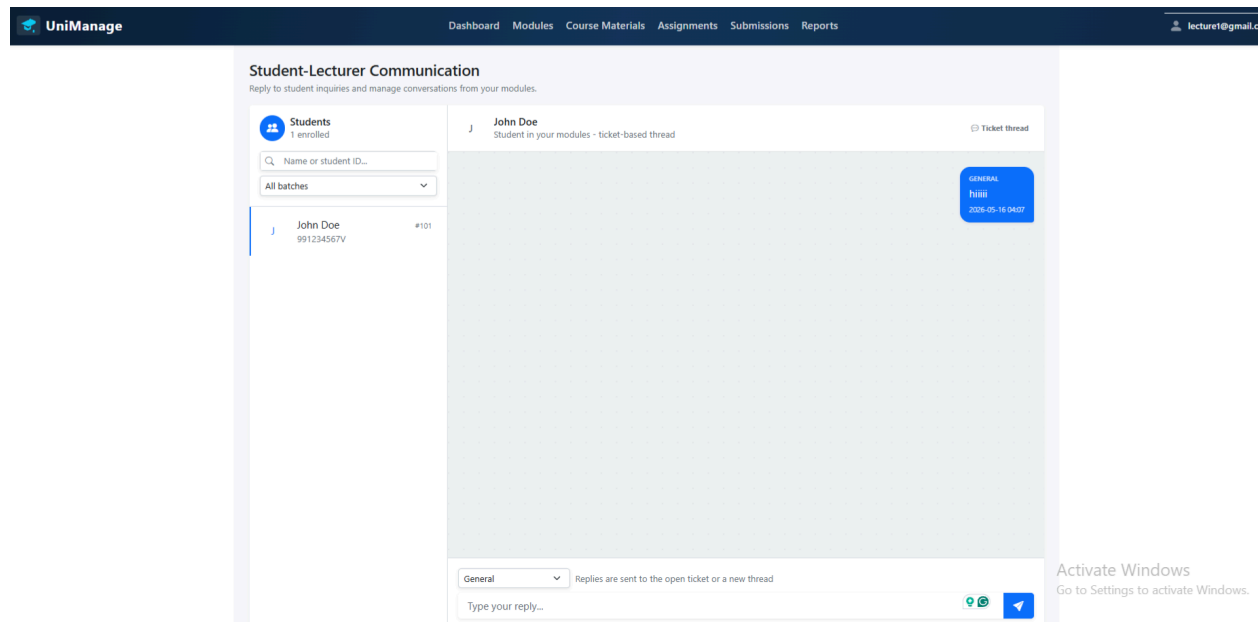

The Profile Management section allows you to keep your personal contact information up to date and manage your account's security credentials. This page is broken into three separate and secure sections to ensure a smooth experience and to prevent inadvertent changes.

Navigating the Interface:

1. The first section you will see is for general profile information and you will need to update this.
 - You can change your address, phone number, and/or edit your name if you change offices, need to change your phone number, or make an error in your name.

- Just edit the appropriate text sections (Contact Number, Address, City) and press the main "Update Profile" button at the bottom of the card. At the top of your screen, there will be a green success notification once the changes have been saved.
2. Changing Your Email Address Your email address is your main login and the main method of communication with the university system.
- You can change it by going to the "Update Email" card.
 - Your current email address will be displayed. Enter your new and correct email address in the "New Email" field and click "Update Email".
 - Security Note: The system will check to ensure that your new email isn't already being used by another staff member. Upon successful updating, you will be securely logged in, without interruption.
3. Change your password periodically – We strongly recommend changing your password periodically to ensure the highest level of academic data security.
- Go to the "Update Password" card.
 - To verify your security, you are required to type in your Current Password first.
 - Then type in your New Password and repeat it on the Confirm Password line to avoid typing a wrong password.
 - Click "Update Password".

Communicating with Students (Messaging)

Messaging module is a secure internal messaging system that allows you to communicate directly with your enrolled students. Use this tool to give timely academic support to a student, whether there is a specific question about a brief or support needed regarding a recent grade, without having to resort to an external email thread.

Navigating the Interface:

1. You can get to your communications immediately from your main screen, which is the quickest access to your Messaging Portal. Just click on the "Messages" quick action button on your Lecturer Dashboard. This will open up your communication corner.
2. The Student Directory (Left Panel): You can teach hundreds of students so the left side of your computer screen is a searchable Student Directory.
 - Searching: If you know the exact person you want to look for, enter the student's name or University ID in the Search box in the top left corner.
 - Only send a message to a student in a particular class – use the filter in the drop down menu to narrow the directory down to one particular Batch (such as “Software Engineering 2024 Intake A”).

- To select a Student: Click on the name of any student in the list. This will display their profile and will display the main window of communication history with them.
3. The Chat Window (Right Panel) After you click on a student, the right side of the screen is now your Chat Window.
- Message History: All previous messages sent to and from this student will appear. Questions from the student are shown on the left (light gray background) and your responses are shown on the right (shaded in the color of your portal).
 - Timestamps: You can find a little date and time stamp below each message, which will help you to find out exactly when a message was sent and how long it took to be resolved.
4. Send a Message To Reply to a student or start a new conversation:
- Enter in the text box at the very bottom of the chat window.
 - Enter your answer or directions. The text box will automatically expand if you are writing a longer, detailed explanation.
 - Next to the box click the paper plane (circular "Send" button).
 - Your message will immediately be seen in the chat history and the student will be able to read it the next time they log into their portal.
